

A diagram illustrating the three primary anatomical planes: Coronal, Sagittal, and Transverse. A light gray cylindrical bone is shown vertically. Two rectangular planes are depicted: a dark gray plane labeled 'Coronal' and a medium gray plane labeled 'Sagittal'. The Coronal plane is oriented vertically, dividing the body into anterior and posterior portions. The Sagittal plane is oriented horizontally, dividing the body into superior and inferior portions. The planes intersect at a point on the bone.

Sagittal

Coronal
